Earth is only a small planet on the edge of the Milky Way. The Milky Way, our galaxy, has roughly thirty billion stars like our sun. It is itself just one of about a hundred million galaxies in the known universe.

Space is so great and distances are so great that there is a problem in measuring them. Instead of writing down all the zeros, we describe these distances in light-years. A light-year is the distance which light, moving at 186,326 miles per second, travels in one year.

Our closest neighbor galaxy, Andromeda, is more than 900, 000 light-years away from Earth.
